Cal Poly Architecture Student Honored for Design of “Deployable Pod”

SAN LUIS OBISPO – Cal Poly Architecture student Cody Williams was selected for the Special Mention: Deployable Pod category in the annual d3 Housing Tomorrow International Architectural Design Competition.

According to d3, this year’s competition called for transformative solutions that advance sustainable thought, building performance, and social interaction through study of intrinsic environmental geometries, social behaviors, urban implications, and programmatic flows.

Williams, a senior, completed the project as an independent study under the supervision of Professor Thomas Fowler, IV. In addition, Williams’ project will soon be featured in the online magazine "Tuvie: Design of the Future" and was selected by d3 for an exhibition in Monterrey, Mexico.

About d3:

As an organization, d3 is committed to advancing innovative positions in architecture, art, and design by providing a collaborative environment for architects, artists, designers, and students from throughout New York City and around the world. The Brooklyn-based program of exhibitions, events, and publications is focused on generating dialogue and collaboration across geographic, ideological, and disciplinary boundaries in art and the built environment.

The mission seeks to unearth new approaches to connecting, form, space, and materiality with innovative notions of interiority and exteriority at various scales. For more information, go to <http://www.d3space.org/competitions/>.
